

Dear Hiring Team at OpenLoop,

I'm excited to apply for the Front-End Engineer & Designer role at OpenLoop. With over three years of experience crafting intuitive, accessible, and high-performance interfaces, I'm eager to contribute to a mission-driven company redefining digital healthcare experiences.

During my tenure at Wipro Technologies, I led front-end development for a meeting management platform serving enterprise users. I built and optimized over a dozen full-stack features using React.js, Next.js, and Python, including a custom layout engine that enhanced user engagement. Accessibility wasn't an afterthought—I spearheaded platform-wide improvements that increased usability by 30%. More recently, I've extended this focus to healthcare and AI contexts. At Phylactics, I'm developing an AI-driven triage system using FastAPI, React Native, and LangChain, tailored for HIPAA-aligned interfaces.

Beyond engineering, I bring a strong design sensibility. My projects, such as the Accessible Learning Assistant and CipherShare, integrated Figma-driven UI/UX design with rapid prototyping, A/B testing, and responsive theming using Tailwind CSS. These initiatives emphasize my ability to align user needs with technical feasibility and conversion goals.

OpenLoop's emphasis on seamless onboarding and user-first design deeply resonates with me. I'm particularly drawn to the collaborative, cross-functional environment you've cultivated, and your values of autonomy, competence, and belonging echo my own.

I would welcome the opportunity to discuss how my experience and passion align with OpenLoop's mission. Thank you for considering my application.

Warm regards,

Rolano Agnelo Rebelo
